

# GARDEN PARTY HYPAR

## A RANGE OF HYPAR SAILS PROVIDING STYLISH SHELTER & SHADE OUTDOORS

SUITABLE FOR YEAR-ROUND USE, these versatile sails are easily installed. They can be fixed to existing structures such as trees, walls or buildings or can stand alone (as shown above) using poles, guys and ground anchors.

The 'hypar' (from 'hyperbolic paraboloid') follows a convex curve about one axis and a concave curve about the other. The form particularly lends itself to tensile or membrane structures as it creates a double twist in the fabric that gives it strength and stability. Our sails do not fret or flap about, even in strong winds, which also means they hardly ever need to be taken down – and they look great, too.

Our standard sail covers 6m<sup>2</sup>, almost double the coverage of a 2m parasol. It's always available in natural unbleached white and often in other colours (see the red ochre overleaf), and is proofed against wet, rot and fire so it's suitable for use in public spaces, even near open fires and over barbeques. The fabric is easily cleaned and can be re-treated for many years of use.

We supply rustic, natural, untreated, debarked, round-wood timber poles that can be stained or painted and each is complete with simple spliced rope guy, connections and a large cleft ash peg normally adequate for most anchoring situations.

**Right:** two standard hypar sails over an outdoor dining area

# STRAIGHTFORWARD INSTALLATION

Each sail relies on its hypar shape for its integrity and strength; the more pronounced the curves in the shape, the better it will perform. It's important, though, that the connections and anchors that hold up your sail are installed effectively so they can withstand the loads that the structure produces in strong winds.

We are pleased to offer advice and a full design service for your permanent, temporary, demountable, retractable or touring installation. We can supply all the components required: stainless screw eyes, resin anchor system, special spliced ropes, pulley blocks, traditional or modern rigging, alternative ground anchors, bracing struts, etc. Our sails come with full site-specific installation and operating instructions, which are clear and very easy to follow. Alternatively, we offer a full installation service and can provide routine maintenance, cleaning and re-proofing services.

## PRICE LIST

SAILS, TENTS & CANOPIES – suitable for public and private areas

Made from 200g cotton canvas proofed against fire, wet and rot to BS7837.

*Bespoke*

Made specially to order; price depends on size and shape

from £495

*Standard hypar with 4x3m diagonals*

Supplied with spliced ropes or stainless shackle connectors for each corner

£175

### POLES & RIGGING

3m tapered pole complete with mast band connector, spliced rope

guy and cleft ash anchor pegs

£58.75

1m pole as above

£48.75

Spliced guy rope and ash anchor peg

£28.25

M10 stainless screw eyes suitable for screwing directly into timber

or fixing into masonry with proprietary resin anchor system

£14.50

Other fittings and riggings are available for many situations

POA

'STANDALONE' KIT (pictured left)

Everything you need for one standard 6m<sup>2</sup> sail: 1 x sail;

2 x long chestnut coppice poles; 2 x short chestnut coppice

poles; 5 x spliced rope guys; 5 x cleft ash pegs

£395

### INSTALLATION

The price of our installation service depends on the

number and complexity of sail. Mileage is charged

from our offices at £1 per mile

from £250

### DELIVERY

Sail only

from £20

Sail and pole

from £45

*All prices include VAT*
