

## A RANGE OF HYPAR SAILS PROVIDING STYLISH SHELTER & SHADE OUTDOORS

SUITABLE FOR YEAR-ROUND USE, these versatile sails are easily installed. They can be fixed to existing structures such as trees, walls or buildings or can stand alone (as shown in these two photos) using poles, guys and ground anchors.

The 'hypar' (from 'hyperbolic paraboloid') follows a convex curve about one axis and a concave curve about the other. The form particularly lends itself to tensile or membrane structures as it creates a double twist in the fabric that gives it strength and stability. Our sails do not fret or flap about, even in strong winds, which also means they hardly ever need to be taken down – and they look great, too.

Our standard Garden Party hypar sail covers 6m<sup>2</sup> and could be yours for around £500 including installation, while the larger size covers 20m<sup>2</sup> and costs around £1,000. All our sails are proofed against fire, wet and rot to BS7837 so are suitable for use in public spaces. They are always available in natural unbleached white and often in other colours. The fabric is easily cleaned and can be re-treated for many years of use.

We supply peeled rustic poles in coppiced chestnut. Each is complete with simple spliced-rope guy, connections and a large cleft ash peg that's normally adequate for most anchoring situations.

# STRAIGHTFORWARD INSTALLATION

Each sail relies on its three-dimensional hyper shape for structural integrity and strength. It's important that the connections and anchors that hold up your sail are installed effectively and checked occasionally so they can withstand the loads that the structure imposes.

We are pleased to offer advice and a full design service for your permanent, temporary, demountable, retractable or touring installation. We can supply all the components required: stainless screw eyes, resin anchor system, special spliced ropes, pulley blocks, traditional or modern rigging, alternative smooth-planed or metal poles, acorn finials, ground anchors, bracing struts, etc. Our sails come with full site-specific installation and operating instructions, which are clear and very easy to follow. Alternatively, we offer a full installation service and can provide routine maintenance, cleaning and re-proofing services.
