

Our Standard Garden Party hypar sails fix to buildings and trees or stand independently with poles, guys and anchors. The 'hypar' shape curves in two directions, making our sails strong and unlikely to fret or flap about.

The standard sails cover 6m², 12m², 20m² or 40m² and are supplied with all the kit you need for installation in your preferred configuration. They are made in the UK from ethically sourced, unbleached natural white 12oz cotton canvas proofed against fire, wet and rot to BS7837 and suitable for public spaces. Sails are easily cleaned and can be re-proofed for many years of use.

We use coppiced Chestnut or Douglas Fir thinnings for our peeled rustic poles, with traditional spliced-rope guys, stainless connectors and a large cleft Ash stake that's adequate for most anchoring situations.

Our sails are delivered in a bag with simple installation instructions. We offer advice, design and installation services and component parts. Alternative colours, bespoke shapes and sizes, and branding are always available.

GARDEN PARTY STANDARD HYPAR

Sails are edged on the underside with UV-resistant webbing, which passes through a stainless 'O' ring at each corner (pictured far right). The webbing is available in a range of colours (pictured). Sand (fourth from right) is the most popular, with black and white close behind.
